# BADGING & CREDENTIALING WITH BLOCKCHAIN

Blockchain is a technology that records and stores information in a way that makes it impossible to change or hack. Any credentials that are issued to an individual's blockchain portfolio must come from a **verified source**. Once added, the individual is unable to modify. Any changes must come from the issuer. Blockchain is **innovative** in how information is recorded, because once the credential is awarded, the data belongs to the user – not a district or company. This information follows the individual **forever**.
